Publitek is an integrated, technical, and global B2B marketing agency for leading tech brands. With unmatched technical expertise and a worldwide reach, Publitek assists innovative technology and engineering companies in connecting with audiences to effect change on a global scale.

Founded by engineers in combination with technologists, marketers and journalists, Publitek can elevate brands from being perceived as 'just another supplier' to becoming 'technically inspiring industry leaders', championing innovation and driving the advancement of technology that shapes the future.

Whether it's a need to build awareness and consideration or a more analytical approach to demand and lead generation, Publitek completes your modern, data-driven, content-fueled marketing machine.

PUBLITEK

BACK-END ENGINEER (PYTHON)

/ The role:

- We are looking for a back-end engineer to join our growing product team.

- Reporting to our VP Data & Tech, the ideal candidate will have a strong background developing ETL pipelines using Python and will further develop our in-house ETL and visualisation platform.

/ Your contribution to something big:

- Work closely with the team to design and improve our "Seer" infrastructure
- Expand our existing codebase to enhance the scalability, robustness and security of a full-stack ETL pipeline
- Develop new API connectors to fetch data from external sources
- Increase the performance of message queues, job scheduling and payload delivery
- Identify system bottlenecks and engineering neat solutions to increase speed
- Build and test code using infrastructure as code
- Document all processes, connectors & data sources

/ Our ideal teammate has/is:

- At least 3 years of relevant experience as a Python developer
- DevOps knowledge, including Git, AWS, Kubernetes
- Strong understanding of how to build and test code using CI/CD pipelines
- Experience working with SQL and NoSQL databases, specifically MongoDB or DocumentDB

- Experience deploying environments using Terraform
- Comfortable writing unit/automated tests
- Ability to produce quality documentation
- Excellent problem-solving skills and attention to detail
- Thirst for knowledge, smart attitude, and passion for technology
