

About News UK: News UK is a company full of talented, dedicated and creative people. We are an ambitious and ever-growing organisation with a passion for storytelling, capturing moments, meaning and magic to make sense of the world. Our newspapers reach more than 30 million people each week and include The Sun, The Times and The Sunday Times. News UK is also home to Unruly, a global ad tech company, and Wireless, a leading UK and Irish media company boasting independent local and national radio stations.

Your team: News Broadcasting is part of a thriving engineering community in Technology who design, develop and operate all of News UK's customer facing products and platforms. We are ushering in a new age of radio and audio products, focusing on new technologies and platforms that will drive our strategic goals across our brands. These brands include talkSPORT, talkRADIO, Virgin Radio UK and Times Radio.

News UK

FULL-STACK JAVASCRIPT ENGINEER

/ The role:

You are a talented and passionate Full-stack JavaScript Engineer who will seed our Web Platform team in Sofia. You'll be a key component of a team delivering quality software. You'll interact with product owners and stakeholders, contribute to the technical conversations and ensure that what we build is best in class and fit for purpose. You'll report in to a Principal Engineer and will help him/her deliver on the technical strategy and tactical implementation. You'll interact, communicate and collaborate with the engineers based in London and Sofia.

/ Your contribution to something big:

- You'll be involved with the technical direction as well as day-to-day coding standards and best practices
- You'll be a mentor to your peers and team members, a source of technical expertise, and will participate in strategic conversations with the rest of engineering and the business
- You'll feel comfortable presenting to internal teams as well as external Meetups and the like, representing the engineering work at News UK

/ Our ideal teammate has/is:

- You are an experienced software engineer with a passion for writing clean, well-crafted, and well-tested code
- You are always thinking about the underlying software architecture and how we can continually improve it
- You understand the importance of testing and are an advocate of Test Driven Development
- You are comfortable working in an Agile environment and know the value of the agile ceremonies

- You have a passion for solving complex problems and love to learn
- You are a team player and can collaborate with others
- You are actively involved in software community events or meetups or have the desire to be
- Experience in Javascript and TypeScript, with a focus on frontend development
- Experience building fullstack applications using React and Next.js
- Experience in testing frameworks such as Jest, and React Testing Library, REST and GraphQL APIs
- Experience with the AWS cloud platform and a working knowledge of Kubernetes
- Experience with Git, CI/CD pipelines such as CircleCI, and other DevOps practices
- The ability to support and coach more junior members of the team

Brownie points:

- Experience working with design systems, CSS-in-JS or Sass
- Experience with New Relic or similar monitoring tools
- An understanding of Isomorphic / Universal Javascript
- An understanding of multi-tenant applications
- Ability to performance test high traffic websites and understand problem areas
- Understanding of SEO and Core Web Vitals
