

Zeelo is growing fast and we're looking to rapidly grow our engineering team to take advantage of significant new market opportunities. We're looking for passionate technologists who are driven by quality delivery and personal growth. We have a strong team culture which emphasises the value of personal responsibility and supporting other team members to achieve in a face paced environment.

Zeelo connects organizations with vetted fleet operators via a mobile app and best-in-class operational tools. It offers route planning and optimisation software to control costs and target areas poorly served by public transit. Riders, organizations and fleet operators get access to 24/7 support, operational monitoring and contact tracing safety tools.

LEAD PHP ENGINEER

/ The role:

You will be working on the smart bus platform for organizations with a mission to build the world's leading smart mobility platform for organizations, enabling access to safe and sustainable transportation for everyday journeys. They will be working on a best-in-class technology platform that connects organizations with riders and operator partners via a route optimization platform, mobile apps and operations management system. The product also has an ecological impact reducing CO2 emissions.

/ Your contribution to something big:

- As a Team Leader you ensure that the team works well together on a day to day basis to deliver high quality product improvements to agreed timelines
- You are motivated to develop the overall capability of the business, your team and the individuals in your team
- You set a high watermark of quality for the team and lead by example, you work deliberately and intelligently to help everyone in your team develop but you don't hesitate to address performance issues if they arise

/ Our ideal teammate has/is:

- An expert PHP developer
- Experience working with PHP Frameworks, preferably Symfony
- Good experience with other backend languages and programming style
- Expert knowledge of MySQL including advanced data structures and optimization

- Deep understanding of microservice architectures including exposure to different message passing paradigms (synchronous over HTTP, gRPC, Event-Sourced)
- Expert understanding of software development security
- Appreciation of architecture decisions and trade offs
- Experience of delivering code reviews and mentoring/training other developers
- A versatile, practical, pragmatic worker capable leading development teams to deliver complex features over several sprints
- Extremely reliable delivery and good accuracy when estimating
- Have worked integrating different systems with different technologies together
- Have experience with code profiling and performance optimization
- Familiarity with AWS and modern dev ops concepts
- Have experience with CQRS
- Are interested in machine learning and build data-driven solutions

Brownie points:

- Have managed teams in both startup and corporate environments
- Experience designing and implementing OKRs and performance metrics
