

# Senior Front-End Developer

Founded in 1934, William Hill ([www.williamhillplc.com](http://www.williamhillplc.com)) is one of the most trusted brands in the online betting marketplace, attracting millions of customers from around the world. Employing more than 15,500 people in 12 countries, at William Hill we continually innovate to bring our customers engaging ways to bet and game, whether in betting shops, sports books, online or on their mobile devices. And we are committed to enabling them to gamble in a positive way, with a range of tools and systems that promote customers' control as part of our [Nobody Harmed ambition](#).

This is a highly innovative industry and, as one of the largest companies in gambling, we're continuously investing in our people, product and marketing to bring customers a great experience.

## Working at William Hill:

Do you want cool projects focused on online sports betting and gaming? Would you like to work on highly reliable systems with low latency, much like the transactional systems of the best financial institutions, but... with fun included? Would you like to work with some of the best Developers, QAs, DevOps Engineers and Project Managers?

Working with us you'll be at heart of the technological revolution of one of the world's most trusted betting and gaming companies. We deal with projects ranging from widgets, desktop or mobile casinos and betting sites. We process 500 online Sportsbook bets per second each Saturday, that's the same as orders processed by Amazon UK, on its busiest day of the year. We deal with more than 20 million users and 160 terabytes of data daily.

## Your contribution to something big:

- Collaborating with experienced designers to implement user-facing features in company's products
