

JavaScript Engineer (Compliance)

News UK

News UK is a great company full of talented, dedicated and creative people. We are an organisation that holds journalism at its very heart. Our newspapers and digital products include some of the most powerful media brands in the English speaking world: the Times, The Sunday Times and The Sun - reaching 30 million people each week. Despite differences in audience and content our brands are united by a commitment to independent journalism that connects our customers..

Our Department, Technology, has people and product at its heart. Passionate and trusted experts creating industry leading solutions through attracting and developing the best talent. CTO of the Year (Tech Leaders) 2017, Christina Scott, leads the department and has worked for many years transforming technology teams in large media organisations.

You will be joining the team responsible for building the necessary underlying capabilities that will help power our digital products well into the future. We work closely with our peers in all parts of the organisation to build world class products and services that our customers love.

The team: Data

A passionate team of Data Scientists, Engineers and experts that use machine learning and data to power the digital product, marketing and advertising experience of customers across our brands. We build innovative tools for our newsrooms and govern the effective and ethical use of data.

The role: We are looking for a talented and passionate JavaScript Engineer to join our team based in Sofia and will be responsible for configuring and maintaining SourcePoint, which is our Content Management Platform (CMP).

Your contribution to something big:

- Create and manage appropriate properties (sites) or groups, vendor lists, cookie banner and setting page layouts, scenarios and partitions, campaigns and reporting facilities.
- Make the necessary changes to the 'look and feel' and functionality of the properties on the CMP in line with approved requests. You'll also run cookie audits of our titles understand if new cookies have been introduced.
- Inspect product behaviour and review code repositories to understand and document how and why all cookies are set.
- Develop code and collaborate with The Sun, The Times, Wireless and Tag Management engineering teams to ensure our first-party cookies and tags respect consent strings in our CMP.
- Manage, review and update user access on a 'need to know' basis.
- Maintain and cultivate a centralised knowledge repository of information from a wide range of sources and content types and make this information widely available.

Our ideal candidate has:

- Strong understanding of client-side scripting and JavaScript, ideally including frameworks such as React/Redux and Python.
- Experience working with partners in the PaaS and SaaS spaces to leverage the best of commoditised services.
- Knowledge of asynchronous request handling, partial page updates, Ajax and browser testing and debugging tools.
- Experience with working with open-source projects and the communities that underpin them.

The company offers:

- 25 days paid leave to enjoy with your family and friends
- Premium Additional Health Insurance for you with an option to add a family member
- Exceptional Social Package & Special Discounts
- Multiple Tech & Non-Tech events
- Fruity Afternoons & Beer Thursdays
- Excellent Office Location close to the South Park & Paradise Mall
- A wonderful mountain-view terrace available to relax, party & work from
- Free Bike Parking
